

App: Logging in

To use the app you need [an account on the Rappt.IO website](#) which is a [member of an existing project](#).

If you don't have an account, go to the [Create new account](#) page. After you have created an account and logged into the website, you can then [create your own trapping project](#), or [request to join other projects](#).

As soon as you have an account which belongs to a project, you can use the app. The main app menu allows you to select a project, and from there you can begin adding data or changing the app settings.
