

Why can't new members see installations?

When a new member is added to a project without any permissions, they have limited access.

As a basic trapper they can:

- Add new installations
- **Be assigned to existing installations**
- Add and update the records for only those installations

A Project Administrator can **update the new member's role** to Advanced trapper to allow view only access to all installations via the website, or Manager complete access via the web and the app. If security and privacy is a concern, it is better to specifically **assign installations** to the trapper.

Read more about what the **different roles mean and how to change members roles**.
